

ELEMIS

BIOTEC Technologies

Ultrasonic

The Ultrasonic spatula draws out impurities, deep cleanses, gently exfoliates surface impurities and pigmentation. Helps stimulate collagen production to minimise the appearance of fine lines and accelerate blood and lymphatic circulation to aid the healing process.

Microcurrent

Microcurrent physically firms and tones the skin while re-educating and strengthening muscle memory for significantly firmer, more defined facial contours. Helps to improve production of collagen and elastin while stimulating the micro-circulation.

Galvanic

Galvanic minimises the symptoms of ageing brought on by stress and tiredness – fine lines, dullness, photo-ageing, sensitivity, and blemishes. The skin will be deep cleansed and left instantly rejuvenated.

Light Therapy

Red Light:

stimulates collagen production, increasing cell renewal and boosting the micro-circulation to plump and smooth the appearance of fine lines leaving skin feeling firmer and tighter.

Blue Light :

delivers a powerful anti-bacterial effect to minimise skin-bacteria. It will soothe and calm, whilst reducing redness with its anti-inflammatory properties.

Oxygen Infusion

Oxygen therapy uses powerful bursts of compressed air to infuse the skin with a combination of 95% pure oxygen and selected high-potency actives to help visibly plump out fine lines and increase skin firmness. Helps restore elasticity, stimulate tissue repair, heal, and rebalance the skin, the O2 infusion delivers a refreshed, radiant, and healthier looking skin.
